Improving Nursing Practice through Innovation: The Nurse as the Entrepreneur and Inventor

Nurses play many roles in health care delivery and public health practice. Not only are they the frontline practitioners, they also conduct research and provide leadership to improve the population’s health. One aspect of lasting impact that is often overlooked is the nurse as an inventor. Innovative nurses often build on existing tools and devices to improve the delivery of health care and to decrease medical errors.

In this one-day workshop, the George Mason School of Nursing invites nurses at all practice levels to learn how other nurses brought an idea to fruition to close gaps in health care delivery. Nursing CEUs will be provided. Visit chhs.gmu.edu/academic-outreach for more information.
